Cup and slide Cup and slide is a technique used for harness racing in which a jockey places a leg over the withers of a horse, while the other leg is held in front of the horse's hindquarters, allowing the rider to place one or more cups on the horse's back to mark the stride and placing a slide on the horse's belly, allowing the rider to follow the horse's movement. To perform a cup and slide, a jockey must use one hand to hold the reins and the other to guide the horse by placing the first cups on the horse. The jockey then slides down the horse's back with the other hand. The jockey can then step on the horse's back with the other foot. When done correctly, this technique permits the jockey to direct a horse through a series of strides, although in many cases cup and slide involves numerous stops and starts as the jockey must guide the horse with the hand that is not holding the reins. Field of the Invention The present invention relates to an information processing apparatus which carries out processing for holding an image in a memory and displaying an image with a color material on a surface of a screen or the like based on the image held in the memory and in particular to a color material supplying apparatus for supplying color materials to the information processing apparatus. 2. Description of the Related Art An image forming apparatus is an apparatus which performs printing with a color material on a surface of a recording medium. A printer, a copy machine, a facsimile and the like are image forming apparatuses. When an image is output, usually, a color material is supplied to the recording medium. A coating is applied to a photosensitive medium (photoreceptor drum), and the photosensitive medium is rotated and electrostatic latent images formed by scanning exposure are developed into color material images with the developer. A transfer process in which a recording medium and a photosensitive medium are disposed face to face with each other and the color material images on the photosensitive medium are transferred to the recording medium 82157476af
